
of the information age and is widely used to organize, manage and store information. The relational database is used to store and manage information that is structured and organized in such a way that it can be accessed. In a relational database, information is structured into tables that are often organized in a specific way. The relational database consists of a set of interrelated tables in which each table is associated with a certain type of data. The first step in creating a database is to design the relational model of data that will be stored. The second step is to create the physical structure for the database. The physical structure of the database is a collection of tables, each of which is a list of rows and columns. Why choose Microsoft Dynamics NAV?
